

Check-in #2 w/ Dylan - Meeting Notes

Justice League team
Dec 4th

Summary:

- Agreed that "My Neighborhood" page should be similar to a "Feed" in Twitter where the user is shown crimes/ posts for the neighborhoods they follow
- Discussed how to make the map more user-friendly by highlighting the markers for neighborhoods the user follows
- Discussed how to maintain the safety of crime victims by adding a note to the user and removing street numbers from tooltips of the markers
- Discussed how to make post more user-friendly by changing the main filter to the neighborhood filter user just posted to

Advice from Dylan:

- Store latitude and longitude in the database itself, so that we don't have to constantly call the geocoding API (only once for data generation)
- Change the color of the markers if a crime belongs to a neighborhood the user follows
- Redirect the main filters to be the neighborhood that you posted to (immediately after posting)
- Add a note to inform the user that crime locations are approximate ("Addresses have been masked for the safety of crime victims")
- Remove street number from the tooltips on the markers (just so that the user feels the address is generic)
- Try to reproduce bug that Dylan got when posting

New Decisions:

- Add a date filter to main page to filter crimes by when they occurred
