

Meeting agenda 2

Friday, Dec 4th, 2020

Team Justice League

List of points to discuss

- The issue with API request limit for the geocoding API (see description under “difficulties”)
- How to best structure the “My neighborhood” page which should contain info about followed neighborhoods
 - Our idea was to make it look the same as the main page but display only content about followed neighborhoods
- Although the map is associated with an address that’s not specific to the crime, should we change the markers to circles to make it feel like we’re not pin-pointing the location of a crime

Achieved and missed milestones from project plan

- We achieved all the outlined goals in our project plan for the milestone
- Something we failed to explicitly account for was the “My neighborhood” page, which we would like some advice on how to structure

Difficulties encountered

- The maximum number of requests exceeded with [the geocoding API](#) . Seems we are able to geocode [15000 locations per month](#) per API key. This does not seem to be enough as we hit the limit on our demo day and we had to input a new key.
- There are two different dropdown on the main page - the main one for filtering by crime type/ neighborhood, and another one under the “Post” tab for posting to a particular neighborhood
 - Sometimes posting to a neighborhood doesn’t show up because a user may post to “MIT” when the current filter is on for “Area 4”
 - How should we resolve this?

Changes to the design

- We decided to discard the functionality of editing posts (This is what Twitter does with tweets as well) b/c we want users to be more thoughtful of what they post
