

Meeting agenda, Nov 13th

Justice League team:

Fernando Herrera
Stuti Vishwabhan
Wenbo Shi
Sanja Simonovikj

Progress update:

We have not started implementing because we'd like to focus on our conceptual design and wireframes first. We narrowed down the scope of our project and have a much better idea of how to start. Particularly, we decided to not implement Crime Reporting based on peer feedback we received - dealing with civil, safe, and politically correct reports seemed highly complex for the scope of this project. We have decided to include the heatmap since that received positive feedback and provides a good visual element to the web application. We're currently still discussing and would like guidance on how to handle crime alerting and commenting.

Points to discuss:

1. Scope of the project?
 - a. What concepts should we prioritize?

Current idea:

 - We have a heatmap with filters for crimes
 - Have users but only ordinary ones (no users with special privileges)
 - Users can comment and upvote crimes and other comments
 - Users can't report new crimes (all crimes pulled from an official gov database)
 - Have a feed for crimes in neighborhoods you follow
2. How to ensure safe discussions on crime?
 - a. How are we gonna handle inappropriate language?
 - Flag or Report as Inappropriate
 1. If there are many flags, then remove it.
 - b. Ones that do not target particular people - how to prevent racial profiling?
3. How are we gonna handle false comments on crimes?
 - a. Upvoting - is this enough? What else can we do?
 - b. One idea: Remove/hide comments if they get downvotes many times.
